

BREEDING FOR THE FUTURE

12th Annual

Bull And Female Sale

Saturday,
November 25th,
at 1:00pm

Selling
120
Head

19 Registered Angus Bulls,
25 Registered Sim-Angus Bulls,
32 Reg. Angus Cow/Calf Pairs & 5 Bred Heifers and 40 Commercial Bred Heifers

WELCOME

On behalf of my entire family, Tim and Susie Barr and all guest consigners, I would like to invite you to are 12th annual production sale. We are constantly trying to improve on the genetics in our cattle herd, so we can provide you with top-of-the-line seed stock that will allow you to produce quality cattle in your herd.

We raise our cow herd in the real world just like most of you do with very little supplemental feed. Only retaining replacements out of the blood lines that excel on grass and hay. Trying to make the most efficient, fertile mama cows with longevity that adds pounds to her calves at weaning, that translates into bottom line profit.

As always, we hope you and your family are doing well. And we look forward to seeing you on sale day. But if you are unable to attend the sale you can still participate and purchase cattle online using DVAUCTION. You can come to the farm and view the sale offering at your convenience, view our web page www.breedingforthefuture.com or www.dvauction.com, we will have video's and picture's posted prior to the sale. If you intend to bid through DVAuctions please go ahead and contact them before sale day and get registered to bid. Remember for more info and pictures of the sale offering and to see videos of the cattle go to our web page www.breedingforthefuture.com or www.DVAuctions.com web page. **Thank you;**

Bull Calculator

Online tools have been developed to assist producers to determine if a bull qualifies for their desired category. The websites are:

For Kentucky CAIP:

<http://afs.ca.uky.edu/beef/KBAT>

For complete information:

<https://www.kyagr.com/agpolicy/2023-Program-Guidelines-and-Applications.html>

For Tennessee TAEP:

<https://animalscience.tennessee.edu/bull-calculator>

For complete information:

<https://www.tn.gov/agriculture/farms/taep>

Please take time to check for yourself. It is your responsibility to verify that the animal you are purchasing qualifies for your states cost share category you have been approved for.

DVAuction Watch and Bid Online

Broadcasting Real-Time Auction

We are pleased to bring you real-time internet bidding of this sale.

To bid online, complete the following steps:

- Visit the DVAuction web site at www.dvauction.com
- Click on the "Register" tab
- Enter a user name, password and your contact information.
- Click on "Apply for Bidding"
- Select the sale from the list of other auctions and click "Apply"
- Complete the process by filling out the Banking & Lending information requested.
- Be sure to include a personal contact at your bank. We will contact them in order to get a credit reference.
- Please be sure to apply for bidding at least 2 days in advance.

DVAuction will contact you once you have been approved to bid.

Remember to view our web page

www.breedingforthefuture.com

or www.dvauction.com

Video's and picture's will be posted prior to the sale.

Angus Bulls

Mud River Angus: Again, this year, we went with a more foraged based test rather than using so much grain. We feel like this keeps more in line with the environment the bulls would be in once with our customers. Instead of having them run to a feeder while on feed test, we hand fed the bulls a limited amount of grain, roughly 9 lbs. per day per bull, combined with pasture and hay. This should give you a truer indication of how the bull's calves will perform in a forage-based environment. They averaged **3.45 lbs.** per day. I think you will agree the bulls did quite well in their daily gains. We haven't changed anything in our selection criteria, we continue to select our AI sires based on the several EPD traits, with the emphasis on calving ease, weaning weight, docility, claw score and milk. We are starting off the sale this year with a pair of **Ramesses** sons. Both of these bulls excel for calving ease and growth. The Lot 1 bull had the highest daily gain of all the bulls in the sale at 4.02 lbs. per day. Don't overlook the Lot 3 bull out of **Patriarch**, he is one of my personal favorites in the sale. Lots 4 through 6 are an exceptional set of **Growth Fund** bulls. As you look through the bulls, I think you will agree they are a really nice set of bulls with some really good numbers to back them up. We have several good cow-calf pairs along with some spring bred heifers in the sale. Most of the females are out of the leading AI sires in the Angus breed and several have AI calves by their side. These are cows right out of the heart of the herd. There are 10 pairs of first calf heifers along with several second calf cows. *Thanks, Wayne & Gary Johnson*

This bull is the top weight gainer of all the angus bulls in the sale gaining over 4 lbs. per day. He is AI sired by **Springfield Ramesses 6124** with a high calving ease EPD (15) and yet also good WW (68) and YW (137).

This bull qualifies for both Tennessee and Kentucky cost share and would be a good choice to use on either heifers or a more mature cow herd.

LOTS 19 & 20 OUT OF SALE

What is a Bull Worth?

I often get the question **"How much should I pay for a bull?"** My first answer is "Whatever the market will bear." Admittedly, that answer really gives no insight into return on investment for the producer relative to traits of emphasis for their particular marketing goals. With the record prices currently being observed in all markets of the beef industry, it is no secret that this translates to increased prices of replacement breeding stock.

While to my knowledge, no calculator exists to determine the exact price a producer should spend on a bull, there are multiple factors that can be considered to establish a base price. Typical thumb rules that I have heard over the years for the value of an average purebred or composite bull include 2 times the value of a fed steer, 5 times the value of a feeder calf at weaning, or 25 times the cwt price of feeder calves. In the current market, using these thumb rules, we get an approximate range of \$3975 to \$4650, which is very representative of early sale reports from 2014.

While spending less does not insinuate you have purchased an inferior bull, it should be expected that an above average bull for traits such as calving ease, weaning weight, docility, stayability, marbling, etc., will likely garner a premium.

Assuming an average bull in today's market will be utilized for 4 years and mated to 100 cows, the mating fee over the life of the bull will be \$43 per cow. Regardless of base price, for every \$500 more spent on a herd sire, it raises the service fee only \$5 per cow over the life of the bull.

Given today's feeder prices, for every \$500 more spent on a herd sire, only 3 more pounds of weaning weight per calf would need to be obtained to offset the added investment on a sire improved growth EPDs. Similarly, only 0.5 more calves would need to be born to a sire with an improved calving ease (CE/CE/CED/CEM) EPD profile. Given the fluctuations in grid premiums and discounts, return on investment needed for bulls with improved carcass traits is harder to pinpoint, and will be specific to your operation.

The initial investment of a bull in today's market may seem staggering, but it is an investment that adds immediate value to the herd working forward.

Good luck, and happy bidding.
Patrick Gunn, ISU Extension cow-calf specialist

Sim-Angus Bulls

Nolan and Bagby Performance Cattle: We have built our cow herd over the years using mostly AI Sires. Retaining heifers out of our proven cows, that breed back and wean good calves, consistently without supplemental feed and we do not creep feed our calves. We developed these bulls on a high forage diet and limited feed. Our bulls were weaned in late March, at that time we started hand feeding the bulls 5 lbs. of feed per day and in early April, we turned them on a pasture of Rye grass. In late June we switched to the bull ration feed and went to 6 ½ lbs. per day which we fed thru mid-September, at that time we increased the feed to 9 lbs. per day. We are not trying to fatten the bulls, rather we just feed enough to show a true reflection of their genetics. These Sim-Angus bulls are bred to eat grass and breed cows in our climate without being pampered. From late June until mid-October the bulls had a 2.34 lbs. of daily gain. On October 17th the bulls had an average weight of 1230 pounds. Fifteen out of Twenty-Five bulls had above Sim-Angus herd average CED EPDs, Weaning Weight EPDs and Yearling Weight EPDs. We would appreciate you putting our bulls to work in your herds.

Thanks, Ray Nolan, Kathy Bagby and our families.
